Introduction	2
Chapter 1. Background on infinite-dimensional holomorphy	3
1.1. Continuous polynomials and symmetric tensor products	3
1.2. Linear subspaces in zeros of polynomials	8
1.3. Analytic functions	9
1.4. The Aron-Berner extension	12
1.5. Concept of regularity	14
1.6. Hilbert-Schmidt polynomials	16
1.7. Reproducing kernels	20
Chapter 2. Descriptions of topological spectra and applications	22
2.1. Spectra of algebras of polynomials	23
2.2. Applications for symmetric polynomials	29
2.3. Polynomials on tensor products	31
2.4. The spectrum of $\mathcal{H}_b(X)$ endowed with the Gelfand topology	34
2.5. The Gelfand transformation and linear structures on $M_b$	42
2.6. Linearity of topologies on spectra	47
2.7. Discontinuous complex homomorphisms and Michael's problem	50
2.8. Continuous homomorphisms	51
2.9. Continuous derivations	53
2.10. Ball algebras of analytic functions	55
2.11. $C^*$ -algebras of continuous functions	57
Chapter 3. Hardy spaces associated with topological groups	59
3.1. Hardy spaces on compact infinite-dimensional group orbits	60
3.2. Symmetric Fock spaces associated with matrix unitary groups	74
3.3. Hardy spaces associated with infinite-dimensional unitary groups	86
3.4. Hardy spaces on irreducible orbits of locally compact groups	98
Chapter 4. Reproducing kernel spaces of analytic functions	111
4.1. Abstract Hardy spaces	111
4.2. Hilbert-Schmidt analytic functions	123
4.3. Holomorphicity and generalized symmetric Fock spaces	130
Bibliography	138
