

Contents

Introduction.....	7
1. Basics of Petroleum Geology	9
1.1. Petroleum system	9
1.2. Organic matter and source rock formation.....	9
1.3. Petroleum source rocks and hydrocarbon generation process.....	10
1.4. Subsurface pressures	16
1.5. Primary migration	17
1.6. Reservoir rocks and their petrophysical properties	19
1.7. Secondary migration	24
1.8. Petroleum seal rocks.....	26
1.9. Trap formation.....	27
1.10. Hydrocarbon accumulations.....	31
1.11. Natural drive mechanisms	34
1.12. Hydrocarbon reserve calculation.....	34
1.13. Destruction of hydrocarbon accumulations – dismigration	36
2. Drilling Related Rock Mechanics	38
Introduction	38
2.1. Stress State	38
2.2. Wellbore Stability.....	43
2.3. Determination of stress in directional wells.....	45
2.4. Calculation of the stability of the hole according to the modified Lade criteria	47
2.5. Calculation of the stability of the hole according to the criterion of Mohr–Coulomb.....	49
3. Drilling Technique and Technology	50
Introduction	50
3.1. Drill string	50
3.2. Casing of oil and gas industry wellbore	58
3.3. Drilling bit	67
3.4. Drill bit operating parameters.....	88
3.5. Units in drilling	92
4. Oil Reservoir Production	107
Introduction	107
4.1. Reservoir and fluid properties – characteristics and method of determination	108

4.2. Primary recovery mechanisms	115
4.3. Methods of oil exploitation	120
4.4. Reservoir deliverability	123
4.5. Artificial lift methods	127
5. Definitions and Terms	129
