<b>Abstract</b> .....	7
<b>Important symbols and acronyms</b> .....	9
<b>1. Introduction</b> .....	11
<b>2. Properties of hearing relevant to selective mixing</b> .....	17
2.1. General functions of the hearing system .....	17
2.2. The auditory filter and the critical band.....	20
2.3. Time-frequency resolution of the ear.....	25
2.4. Masking .....	27
2.4.1. Simultaneous masking .....	28
2.4.2. Summing of simultaneous maskers.....	30
2.4.3. Nonsimultaneous masking .....	31
2.4.4. Informational masking .....	31
2.5. Illusion of continuity.....	33
<b>3. The concept of selective mixing of sounds</b> .....	35
3.1. Motivation for selective mixing from literature .....	35
3.2. Removal of spectro-temporal overlap .....	38
3.2.1. The basic operation .....	38
3.2.2. Sizes and shapes of time-frequency regions to be compared .....	41
3.3. The concept of layers.....	43
<b>4. The choice of a time-frequency analysis method for selective mixing</b> .....	46
4.1. Introduction to signal analysis methods relevant to selective mixing .....	46
4.1.1. Linear algebra roots of signal analysis .....	46
4.1.2. The family of Fourier signal decompositions.....	49
4.1.3. Other signal analysis methods .....	51
4.2. Introduction to time-frequency analysis .....	52
4.3. Short-Time Fourier Transform.....	54
4.4. Wavelet Transform.....	55
4.5. Local trigonometric bases.....	57
4.6. Discrete Cosine Transform .....	57

4.7. Modified Discrete Cosine Transform.....	59
4.8. Modified Discrete Cosine-Sine Transform .....	61
4.9. Discussion .....	62
4.10. Conclusion .....	65
4.11. A note on implementation.....	66
<b>5. An overview of psychophysical methods .....</b>	<b>68</b>
5.1. Introduction.....	68
5.2. Classification of psychophysical methods .....	70
5.3. The choice of methods for investigation on selective mixing .....	73
5.3.1. The choice based on literature review .....	73
5.3.2. Comparison of ratio scale with absolute magnitude estimation in evaluation of audio signals .....	75
5.3.2.1. Procedure .....	75
5.3.2.2. Results .....	77
5.3.3.3. Conclusions .....	79
5.4. The panel of listeners.....	80
5.5. The experimental software .....	81
<b>6. Estimation of size and shape of time-frequency regions .....</b>	<b>84</b>
6.1. General assumptions.....	84
6.2. The problem of size .....	85
6.2.1. Perceptual weight of small elements .....	87
6.2.2. Effects occurring in boundaries between areas occupied by different sound sources.....	88
6.2.3. Nonlinear distortion in transition between different sound sources.....	91
6.2.4. Methods for grouping of cells .....	95
6.2.4.1. Smoothing individual spectrograms .....	95
6.2.4.2. Smoothing maps of occupancy.....	99
6.3. Estimation of appropriate size of time-frequency regions.....	104
6.3.1. Simple evaluation of perceptual differences .....	108
6.3.2. Evaluation of perceptual differences with the use of signal detection theory .....	120
6.3.2.1. Mixtures of musical instruments .....	120
6.3.2.2. Mixtures of everyday sounds.....	125
6.3.3. Numerical estimation of smoothness of shapes .....	127
6.3.4. Final conclusions on size.....	131
6.4. Perceptual effect of proportion in rectangular shape .....	132
6.4.1. The comparison of performances of the 256 transform versus the 1024 transform.....	133
6.4.2. Performance of transforms in limited frequency ranges .....	136
6.5. Does energetic masking contribute to perception of removal of spectral overlap? .....	138

<b>7. An attempt to introduce context rules</b> .....	141
<b>8. Application of removal of spectro-temporal overlap to speech</b> .....	145
8.1. Speech as a material for quantitative assessment .....	145
8.2. Method .....	146
8.3. Results .....	150
8.4. Conclusions .....	152
<b>9. Multi-layer selective mixing</b> .....	153
9.1. Possible approaches .....	153
9.2. An improved method of smoothing .....	156
9.3. The comparison of basic approaches .....	161
9.4. An objective measure of the degree of the effect based on energy .....	164
9.5. The choice of an option for threshold-based selection .....	167
9.6. The effect of threshold on absolute rating in evaluation categories .....	170
9.7. Evaluation of perceptual sensitivity to the degree of selection in low, middle and high frequency bands .....	172
9.8. Evaluation of the degree of selection appropriate in low, middle and high frequency bands .....	175
9.9. Evaluation of multi-band selective mixing .....	177
9.10. Perception of selective mixing by hearing impaired listeners .....	179
9.11. Final evaluation .....	181
<b>10. Summary and recommendations</b> .....	184
<b>Bibliography</b> .....	187
