Summary	7
Streszczenie	10
Nomenclature	13
Chapter 1. Introduction	15
1.1. Motivation	15
1.2. Classification of two-phase flows	18
1.3. Phase coupling	19
1.4. Relevant parameters	21
Chapter 2. Fluid-particle interaction	31
2.1. Steady flow	31
2.2. Forces in non-uniform flow field	36
2.3. Forces in non-stationary flow field	37
2.4. Lift forces	38
2.5. Equation for particle motion	40
2.6. Energy coupling	42
2.7. Additional effects	43
2.8. Equation for particle temperature	44
Chapter 3. Fluid flow model	47
3.1. Equations for fluid motion	49
3.2. Equation for fluid temperature	51
3.3. The dimensionless form of the governing equations for continuous phase ...	51
3.4. Model equations for channel flow	52
Chapter 4. Numerical model	56
4.1. Problem formulation	56
4.2. Lagrangian particle tracking procedure	59

4.3. Parallelization and technical data	61
4.4. Summary of simulations	64
Chapter 5. Flow field analysis	66
5.1. Introduction	66
5.2. Results for the flow field	68
5.3. Results for thermal field	77
Chapter 6. Particle results	83
6.1. Introduction	83
6.2. Particle time evolution	84
6.3. Particle drift dispersion	87
6.4. Flow structures	90
6.5. Particle instantaneous velocity and temperature	97
6.6. Particle mean velocity	111
6.7. Particle mean slip velocity	113
6.8. Particle velocity fluctuation	116
6.9. Particle velocity distribution	120
6.10. Particle concentration	122
6.11. Particle temperature and its fluctuation	125
6.12. Particle mean turbulent heat fluxes	135
6.13. Energy spectra	141
6.14. Mean velocity and its fluctuation at $Re_{\tau} = 395$	144
6.15. Mean temperature and turbulent heat flux at $Re_{\tau} = 395$	153
6.16. Particle mean temperature distribution at $Re_{\tau} = 395$	155
6.17. Particle temperature fluctuation	157
6.18. Particle mean force component	163
Conclusions	165
Bibliography	169
