

Contents

1. Introduction	13
1.1. Definition of Sound Synthesis	13
1.2. Taxonomy of Synthesis Methods	15
1.3. The Purpose and Scope of the Monograph	18
2. Direct Methods	20
2.1. Spectral Methods	20
2.1.1. Modular View on Elements of a Synthesizer	20
2.1.1.1. Voltage Controlled Oscillator	21
2.1.1.2. Voltage Controlled Amplifier	25
2.1.1.3. Voltage Controlled Filter	25
2.1.1.4. Low Frequency Oscillator	25
2.1.1.5. Envelope Generator	26
2.1.2. Additive Synthesis	30
2.1.2.1. Evolution of Spectrum	31
2.1.2.2. Control Data	32
2.1.2.3. Resynthesis	35
2.1.2.4. Control of Pitch, Duration, and Timbre	37
2.1.2.5. Variants of Additive Synthesis	42
2.1.2.6. Implementation Remarks	43
2.1.3. Subtractive Synthesis	45
2.1.3.1. Source-Modifier Principle	46
2.1.3.2. Synthesizer Designs	49
2.1.3.3. Resynthesis	52
2.1.3.4. Control of Pitch, Duration, and Timbre	57
2.1.3.5. Descendants of Subtractive Synthesis	60
2.2. Waveform-Based Methods	61
2.2.1. Wavetable Synthesis	61
2.2.1.1. Single-Cycle and Multi-Cycle Wavetable	63
2.2.1.2. Signal Modification and Evolution	65
2.2.1.3. Resynthesis	68
2.2.1.4. Control of Pitch, Duration, and Timbre	69
2.2.1.5. Multiple Wavetable Synthesis	70

2.2.1.6.	Wave Terrain Synthesis	72
2.2.1.7.	Progress of Wavetable	77
2.2.2.	Sampling	78
2.2.2.1.	Digital Sampling Synthesis Principle	81
2.2.2.2.	Control of Pitch	83
2.2.2.3.	Control of Timbre	88
2.2.2.4.	Control of Duration	89
2.2.2.5.	Application of Envelopes and Filters	92
2.2.2.6.	Sampler Features and Implementation Remarks	94
2.2.3.	Granular Synthesis	97
2.2.3.1.	Grains	99
2.2.3.2.	Time-Frequency Plane Matrices and Screens	102
2.2.3.3.	Pitch-Synchronous Granular Synthesis	103
2.2.3.4.	Synchronous and Quasi-Synchronous Granular Synthesis	103
2.2.3.5.	Asynchronous Granular Synthesis	105
2.2.3.6.	Physical and Algorithmic Models	108
2.2.3.7.	Granulation of Sampled Sounds	109
2.2.3.8.	Particle Synthesis	110
2.2.4.	Concatenative Synthesis	117
2.2.4.1.	Segmentation	120
2.2.4.2.	Analysis and Descriptors	126
2.2.4.3.	Target	126
2.2.4.4.	Database	127
2.2.4.5.	Selection	128
2.2.4.6.	Synthesis	131
2.2.4.7.	High Level Instrument Synthesis	132
2.2.4.8.	Real-Time Concatenative Synthesis	133
2.2.4.9.	Expressive Concatenative Synthesis	135
2.2.4.10.	Other Variants of Concatenative Synthesis	141
3.	Indirect Methods	147
3.1.	Abstract Methods	147
3.1.1.	Frequency Modulation	147
3.1.1.1.	Frequency and Pitch	149
3.1.1.2.	Modulation Index	151
3.1.1.3.	Multiple Carriers and Modulators	157
3.1.1.4.	Feedback	161
3.1.1.5.	Operators and Algorithms	163
3.1.1.6.	Simulation of Instruments and Resynthesis	165
3.1.1.7.	Variants and Derivatives of FM Synthesis	166
3.1.2.	Waveshaping	172
3.1.2.1.	Shaping functions	173
3.1.2.2.	Amplitude Control	175
3.1.2.3.	Variants of Waveshaping	176

3.1.3.	Non-Standard Methods	177
3.1.3.1.	Waveform Segment	177
3.1.3.2.	Graphics Synthesis	178
3.1.3.3.	Motion-Driven Synthesis	180
3.1.3.4.	Noise Modulation	182
3.1.3.5.	Stochastic Waveform Synthesis	185
3.1.3.6.	Cellular Automata Synthesis	186
3.1.3.7.	Waveset Distortion	192
3.1.3.8.	Sequential Waveform Composition	192
3.1.3.9.	Neural Audio Synthesis	194
3.2.	Physical Modelling Methods	196
3.2.1.	Finite Difference Approximation	198
3.2.1.1.	Temporal Operators	199
3.2.1.2.	Spatial Operators	200
3.2.1.3.	Input and Output Operators	207
3.2.1.4.	Simplified Ideal String	211
3.2.1.5.	Damped Stiff String	218
3.2.1.6.	String Excitation	222
3.2.1.7.	String Model Refinements	226
3.2.1.8.	Bar	234
3.2.1.9.	Acoustic Tube	237
3.2.1.10.	Reed Excitation Mechanism	239
3.2.1.11.	Toneholes in Acoustic Tube	242
3.2.1.12.	Other Wind Instruments	245
3.2.1.13.	Membrane	245
3.2.1.14.	Plate	248
3.2.2.	Networks of Lumped Elements	253
3.2.2.1.	Lumped Elements	253
3.2.2.2.	Operation	254
3.2.3.	Modal Synthesis	254
3.2.3.1.	Model Data	255
3.2.3.2.	Synthesis Process	255
3.2.3.3.	Output	256
3.2.4.	Karplus-Strong Synthesis	256
3.2.4.1.	Basic Control	257
3.2.4.2.	Plucked Strings and Drums	257
3.2.4.3.	Decay Stretching	258
3.2.5.	Waveguide Synthesis	258
3.2.5.1.	Digital Waveguide	258
3.2.5.2.	Dispersion, Damping, and Other Effects	260
3.2.5.3.	Scattering Junction	260
3.2.5.4.	Examples of Waveguide Configurations	261
3.2.5.5.	Applications	263
3.2.6.	Other Physical Modelling Methods	263

4. Phrase Assembling Synthesis: a New Approach to Music Reproduction	265
4.1. Sound Synthesis in Music Reproduction	265
4.1.1. Shortcomings of Sample-Based Methods	266
4.1.2. Issues of Concatenative Method	268
4.2. The Concept	271
4.2.1. Motivation	271
4.2.2. Key Ideas	272
4.2.3. Method Outline	274
4.2.4. Phrase	275
4.2.5. Signal Processing of Samples	276
4.2.6. Musical Expression	277
4.3. The Design	278
4.3.1. Input and Output	278
4.3.2. Samples and Descriptions	279
4.3.3. The Principle of Operation	281
4.4. The Corpus	283
4.4.1. Instruments	283
4.4.2. Structure	284
4.4.3. Contents	286
4.4.3.1. Units	286
4.4.3.2. Multisampling	289
4.4.4. Recordings	289
4.4.5. Analysis and Preparation of Samples	290
4.5. Applied Techniques	294
4.5.1. Musical Score Analysis	295
4.5.1.1. Score Segmentation Algorithm	295
4.5.1.2. Phrase Matching Algorithm	295
4.5.2. Sound Samples Processing	300
4.5.2.1. Concatenation	300
4.5.2.2. Control of Duration	302
4.5.2.3. Tempo and Rhythm	304
4.5.3. Performance Rules	305
4.5.4. Phrase Envelopes	308
4.5.4.1. Dynamics Envelope	308
4.5.4.2. Tempo Envelope	310
4.6. Implementation	311
4.6.1. Overall Program Design	312
4.6.2. Modules	313
4.6.2.1. Score Analysis Module	313
4.6.2.2. Figure Matching Module	314
4.6.2.3. Waveform Generator Module	315
4.6.2.4. Management Module	316

4.6.3.	Program Parameters Adjustments	317
4.6.3.1.	Listening Tests – Phase I	318
4.6.3.2.	Listening Tests – Phase II	322
4.6.4.	Evaluation	325
4.7.	Concluding Remarks	325
4.7.1.	Issues and Necessary Improvements	326
4.7.2.	Further Development	326

5. Infeasible Instruments:

	a Novel Means for Music Performance	329
5.1.	Synthesis Methods for Music Performance	329
5.1.1.	Control and Timbre Capabilities	330
5.2.	Infeasible Quasi-Physical Systems as Musical Instruments	331
5.2.1.	Concept of Infeasible Instruments	332
5.2.2.	Design Outline	332
5.3.	Real-Time FD Simulations Using GPUs	334
5.3.1.	GPU Programming Framework	335
5.3.1.1.	OpenCL Standard	336
5.3.1.2.	Heterogeneous Computing	340
5.3.1.3.	OpenCL Framework Contents	340
5.3.2.	Single String	342
5.3.2.1.	The Model	342
5.3.2.2.	Finite Difference Scheme	342
5.3.2.3.	Implementation Considerations	344
5.3.2.4.	Program Design	345
5.3.2.5.	User-Controllable Instrument Parameters	347
5.3.2.6.	Host Program	348
5.3.2.7.	Kernel	353
5.3.3.	Multiple Strings	357
5.3.3.1.	Implementation Considerations	358
5.3.3.2.	Changes in Program Design	358
5.3.3.3.	Control Considerations	359
5.3.3.4.	Host Program	359
5.3.3.5.	Kernel	363
5.3.4.	Real-Time Control	364
5.3.4.1.	Control Procedure Design	364
5.3.4.2.	Controller Program Implementation	364
5.3.4.3.	Handling Control Events	366
5.4.	Hyper-Dimensional Objects	368
5.4.1.	Hyper-Membrane	369
5.4.1.1.	Basic Model	369
5.4.1.2.	Excitation	370
5.4.1.3.	Finite Difference Scheme	370
5.4.1.4.	Stability	371

5.4.2.	Model Implementation	372
5.4.2.1.	Implementation Considerations	372
5.4.2.2.	User-Controllable Instrument Parameters	375
5.4.3.	Example Signals	375
5.4.3.1.	Brief Evaluation	379
5.4.4.	Other Instruments	380
5.5.	Impossible Boundaries	381
5.5.1.	Looped Boundaries	381
5.5.1.1.	Bi-Directional Loop	382
5.5.1.2.	One-Dimensional Loop	382
5.5.1.3.	Twisted Loop	382
5.5.2.	Implementation Details	382
5.5.3.	Selected Examples	383
5.5.3.1.	Rectangle	383
5.5.3.2.	Square	385
5.5.3.3.	Rectangular Cuboid	386
5.5.4.	Further Study	387
5.6.	Evolving Instruments	388
5.6.1.	Evolution Parameters	388
5.6.2.	Means of Control	389
5.6.3.	Implementation Consideration	390
5.6.4.	Selected Examples	390
5.6.4.1.	Evolving Material Parameter	390
5.6.4.2.	Evolving Shape	391
5.6.4.3.	Floating Readout	392
5.6.5.	Further Study	395
5.7.	Concluding Remarks	395
6.	Conclusions of the Monograph	397
Index	445
