|--------------------------------------------------------------------------------------------------------------------------------------|------------|
| APPENDICES | 135 |
| A1. The results of gas analysis and calculated data for graphite anode and 0 wt.% carbon addition | 137 |
| A2. The results of gas analysis and calculated data for prebaked anode and 0.67 wt.% carbon addition | 137 |
| A3. The results of gas analysis and calculated data for prebaked anode and 1.39 wt.% carbon addition | 138 |
| A4. The results of gas analysis and calculated data for prebaked anode and 3.05 wt.% carbon addition | 138 |
| A5. The results of gas analysis and calculated data for prebaked anode and 4 wt.% carbon addition | 139 |
| A6. The results of gas analysis and calculated data for prebaked anode and 5.92 wt.% carbon addition | 139 |
| A7. The results of gas analysis and calculated data for prebaked anode and 8 wt.% carbon addition | 140 |
| A8. A plot of the confidence band curves at 95% confidence level for CE (Oxy) vs. the carbon addition to the melt | 140 |
| A9. A plot of the confidence band curves at 95% confidence level for CE (P&W) vs. the carbon addition to the melt | 141 |
| A10. A plot of the confidence band curves at 95% confidence level for CC (gas analysis) vs. the carbon addition to the melt | 141 |
| A11. A plot of the confidence band curves at 95% confidence level for CC (anode weight) vs. the carbon addition to the melt | 142 |
| A12. A plot of the confidence band curves at 95% confidence level for DBR vs. the carbon addition to the melt | 142 |
| A13. A plot of the confidence band curves at 95% confidence level for Uel vs. the carbon addition to the melt | 143 |
| A14. A plot of the confidence band curves at 95% confidence level for IRel vs. the carbon addition to the melt | 143 |
| A15. A plot of the confidence band curves at 95% confidence level for ratio IRel/Uel vs. the carbon addition to the melt | 144 |
| A16. Anode effect phenomenon | 145 |
