Kraków 2014
ISBN 978-83-7464-726-7

Editor-in-Chief: *Jan Sas*

Editorial Committee: *Zbigniew Kąkol* (Chairman), *Marek Ciałą*, *Borys Mikułowski*,
Tadeusz Sawik, *Mariusz Ziółko*

Reviewers: *Dr hab. inż. Marian Branny*, *Prof. dr hab. inż. Andrzej Strumiński*

Authors' affiliations:

AGH University of Science and Technology, Faculty of Mining & Geoengineering,
Department of Underground Mining, al. Mickiewicza 30, 30-059 Kraków

*The monograph is a result of strategic research and development programmes
prepared and financed by The National Centre for Research and Development.
The individual chapters have been prepared as a result:*

Chapters: 1, 5, 8, 9, 10 – Result of Strategic Project: *Improving safety of work in mines*,
task 4, contract No. **SP/K/4/143704/11**.

Chapter 2 – Result of Research & Development Project: *Evaluation of Method for
determining methane content in hard coal seams*, Project No. **N R09 0021 06**.

Chapter 3 – Result of Strategic Project: *Improving safety of work in mines*, task 1,
contract No. **SP/K/1/143586/11**.

Chapters 4, 6 – Result of Strategic Project: *Improving safety of work in mines*, task 3,
contract No. **SP/K/3/143694/11**.

Chapter 7 – Result of Strategic Project: *Improving safety of work in mines*, task 2,
contract No. **SP/K/2/143445/11**.

Contents

Introduction.....	9
1. Emissions of methane from hard coal mines as a source of atmosphere pollution.....	13
1.1. Introduction.....	13
1.2. Methods of reducing methane emissions into the atmosphere.....	15
1.3. Emissions of methane from Polish hard coal mines into the atmosphere.....	18
1.4. Methods of methane drainage from the strata implemented in Polish mines.....	19
1.5. Efficiency of methane drainage from coal seams under development.....	23
1.6. Conclusions.....	24
2. Determination of methane content in coal seams along with measurement uncertainty specification.....	25
2.1. Introduction.....	25
2.2. A method of determining coalbed methane content.....	26
2.3. Gas loss during collecting coal samples for measurement.....	27
2.4. The procedure of determining coalbed methane content.....	29
2.5. Evaluation of measurement uncertainty.....	31
2.6. Analysis of measurement uncertainty of coalbed methane content.....	32
2.7. Conclusions.....	37
3. Proposed revisions of the categorisation of methane hazard in underground mines.....	38
3.1. Introduction.....	38
3.2. Determining coalbed methane content.....	39
3.3. Evaluation of methane hazard in mines extracting hard coal.....	40
3.4. Proposed revisions of the categorisation of methane hazard.....	43
3.4.1. Methane hazard in underground mining plants extracting hard coal and lignite.....	43
3.4.2. Methane hazard in underground mining plants extracting non-ferrous metal ore and salt.....	46
3.5. Conclusions.....	46
4. Predicting the release of methane into the longwall workings in Polish coal mines using neural networks.....	48
4.1. Introduction.....	48
4.2. Artificial neural networks.....	50
4.3. Description and analysis of data used to predict the evolution of methane release.....	51

4.4.	Determination of the neural network structure used to predict absolute methane-bearing capacity	54
4.5.	Evaluation of the effectiveness of teaching neural network	57
4.6.	Conclusions.....	59
5.	Possibilities of capturing and utilising methane from hard coal mines	60
5.1.	Introduction.....	60
5.2.	Methane resources in hard coal deposits in Poland	60
5.3.	The current system of supporting the utilisation of methane from hard coal mines	62
5.4.	Utilising the captured methane	63
5.5.	Conclusions.....	66
6.	Monitoring and controlling methane hazard in excavations in hard coal mines.....	67
6.1.	Introduction.....	67
6.2.	Methane hazard control in other countries.....	68
6.2.1.	The United States of America.....	68
6.2.2.	Australia	69
6.2.3.	Russia and Ukraine.....	71
6.3.	Estimation of methane hazard resulting from binding legal regulations in Poland	72
6.3.1.	Mining excavations with auxiliary ventilation.....	72
6.3.2.	Longwalls with U and Y ventilation systems.....	76
6.3.3.	Characteristics of Longwall B-11 in seam 348	76
6.4.	System of continuous control over methane drainage system.....	82
6.5.	Conclusions.....	86
7.	Estimation of methane hazard in the area of U-ventilated longwall.....	87
7.1.	Introduction.....	87
7.2.	Development of guidelines for testing air parameters in order to assess methane hazard	88
7.3.	Verification of standards of sampling air from the goaf	91
7.4.	Guidelines for the measurement and operational methanometric security of the longwalls mined in the presence of methane hazard	95
7.4.1.	General principles for the control and prevention of methane hazard ...	95
7.4.2.	Principles for the control of the amount of methane in air by using a mobile methanometer	96
7.4.3.	Control of methane hazard by means of automated methane monitoring	97
7.4.4.	Inspection and maintenance of the automated system of methane monitoring	99
7.4.5.	Recording the measurements of the automated system of methane monitoring	100
7.5.	Conclusions.....	100
8.	Influence of mining and geological conditions on the efficiency of coal mine methane drainage in Polish mines.....	102
8.1.	Introduction.....	102
8.2.	Methods for methane drainage in Polish coal mines	103

8.2.1.	Methane drainage of longwalls with Y ventilation system	106
8.2.2.	Methane drainage of longwalls from parallel tailgate roadways.....	107
8.2.3.	Methane drainage of longwalls from cut off parallel tailgate road	107
8.2.4.	Methane drainage of longwalls with an overlying drainage gallery	107
8.2.5.	Methane drainage of longwall working to the rise.....	109
8.2.6.	Other methods of methane drainage.....	109
8.3.	Efficiency of methane drainage conducted during mining by means of different methods.....	110
8.4.	Conclusions.....	114
9.	Possibilities of increasing the efficiency of mine methane drainage in the conditions of low permeability of coal seams.....	116
9.1.	Introduction.....	116
9.2.	Gas flow in rock-mass.....	117
9.3.	Pre-mining methane drainage	119
9.4.	Methane drainage with increased permeability	120
9.5.	Results of calculations of methane flow into methane drainage boreholes	121
9.6.	Methane drainage efficiency before mining	123
9.6.1.	Methane drainage of a panel in Longwall B-1 in seam 406/1.....	125
9.6.2.	Methane drainage of a panel in Longwall F-1 in seam 406/1	125
9.6.3.	Pre-mining methane drainage of a panel in longwall G-4, seam 412lg+ld and 412lg	127
9.6.4.	Methane drainage of a panel in longwall G-4, seam 412lg+ld and 412lg	128
9.7.	Conclusions.....	128
10.	Efficiency of methane removal using different drainage systems in Polish hard coal mines.....	130
10.1.	Introduction.....	130
10.2.	Methane drainage systems in Polish coal mines.....	130
10.2.1.	Methane drainage of a panel in Longwall G-6, seam 410.....	130
10.2.2.	Methane drainage of a panel in Longwall Cw-2, seam 364/2.....	132
10.2.3.	Methane drainage of a panel in Longwall B-13, seam 348.....	134
10.3.	Methane drainage from overlying drainage gallery.....	136
10.3.1.	Methane drainage of a panel in longwall XIII, seam 405/1	136
10.4.	Methane drainage efficiency in the developed coal seams	138
10.5.	Conclusions.....	138
