Abstract	5
List of most used terms, abbreviations and symbols	7
1. Introduction	11
2. Fractal and multifractal analysis	14
2.1. Basics of fractal description	14
2.1.1. Box-counting dimension	16
2.1.2. Information dimension	17
2.1.3. Correlation dimension	18
2.2. Basics of multifractal analysis	18
2.2.1. Box-counting method	21
2.2.2. Cumulative mass method	23
2.2.3. MDFA method	24
2.2.4. WTMM method	26
2.3. Summary	27
3. Non-grainy suspensions	28
3.1. Origination of particles in non-grainy suspensions	28
3.2. Structure of colloidal particles	30
3.3. DLVO theory	32
3.4. Aggregation of colloidal particles	33
3.5. Structure of non-grainy particles	36
3.6. Dependences between characteristic radii in aggregates	38
3.7. Porosity of fractal aggregates	40
3.8. Permeability of non-grainy particles	42
3.9. Summary	47
4. Sedimentation process of particles	49
4.1. Process of sedimentation	49
4.2. Free falling	50
4.3. Constrained sedimentation	54
4.4. Sedimentation process of non-grainy particles – classical approach	55
4.5. Sedimentation process of non-grained particles – fractal approach	58
4.6. Summary	62

5. Quality of products of sedimentation process	64
5.1. Concentration of suspension – quality parameter.	64
5.2. Turbidity – indicator of suspension quality.	65
5.3. Efficiency of sedimentation as indicator of quality of operation of sedimentation devices.	74
5.4. Summary.	75
6. Laboratory tests of sedimentation process of non-grainy suspensions	76
6.1. Characteristics of tested material	77
6.1.1. Mineralogical identification of bentonite samples.	78
6.1.2. SEM imaging of bentonite samples.	78
6.1.3. Chemical composition	79
6.1.4. Phase composition	79
6.1.5. Zeta potential of bentonite samples	82
6.2. Granulometric composition.	83
6.2.1. Particle size distribution – sedimentation balance.	83
6.2.2. Particle size distribution – measurement by laser diffraction.	86
6.2.3. Results of measurements of particle size distribution of bentonite suspensions	87
6.3. Determination of bentonite density.	89
6.4. Structure of particles in suspension-fractal dimensions	89
6.4.1. Determination of fractal dimensions of particles in suspension – LALLS method	89
6.4.2. Fractal dimensions of bentonites	92
6.5. Studies of sedimentation process of non-grainy suspensions	94
6.5.1. Laboratory stand – model of sedimentation tank equipped with multiflux lamella packet.	95
6.5.2. Sedimentation rate – sedimentation test	97
6.6. Summary.	99
7. Model of sedimentation process of bentonite suspension	100
8. Guidelines for design process of sedimentation devices.	104
9. Summary and conclusions.	106
References.	107
