

Table of contents

1. Introduction	11
2. About the Min-Novation project	13
2.1. Origin	13
2.2. Assumptions	13
2.3. Objectives	14
2.4. Partnership	15
3. Min-Novation project outputs	17
3.1. Introduction	17
3.2. Baltic Mining Waste Management Business Database	17
3.3. Compendium & State-of-the-Art of mining waste management technologies	20
3.4. Pilot installations	24
3.4.1. Estonia – Oil Shale Waste-to-Product Mobile Unit	24
3.4.2. Finland – Mining Waste and Process Side Stream Assessment Lab	26
3.4.3. Poland – Coal-Derived Aggregate Production Line	28
3.4.4. Sweden – Mobile Metal Recovery Installation	31
3.5. Conclusion	33

4. General information concerning extractive waste management in Partner countries or regions	35
4.1. Introduction	35
4.2. Mining and processing waste management in Estonia	35
4.3. Mining and processing waste management in Finland	44
4.4. Mining and processing waste management in Germany	49
4.5. Mining and processing waste management in Norway	55
4.6. Mining and processing waste management in Poland	60
4.7. Mining and processing waste management in Sweden	69
4.8. Conclusion	80
5. Legal framework of mining and processing waste management	83
5.1. Introduction	83
5.2. Past and present milestones in the development of EU policy on mining waste	84
5.3. EU-level directives and their impact on regional policies	86
5.4. Legal regulations as incentives or disincentives for mining waste management	89
5.4.1. Implementation of EU level directives and decisions in Baltic Sea Region countries	89
5.4.2. Legal regulations as incentives or disincentives for mining waste management. Case study from Poland	91
5.5. Conclusion	95
6. Mining and processing waste management methodologies and technologies	97
6.1. Introduction	97
6.2. Waste from metal mining	98
6.2.1. Case study from Sweden – mine water treatment using mining waste	103
6.2.2. Case study from Finland – Reuse of pyrite tailings from Pyhäsalmi Mine Oy	105
6.2.3. Case study from Poland – engineering solutions for safer development and operation of the Żelazny Most tailings storage facility	111

6.3. Waste from oil shale mining	122
6.3.1. Case study from Estonia	
– utilization of oil shale waste rock	124
6.4. Waste from oil drilling and production	129
6.4.1. Case study from Norway	
– Thermomechanical Cuttings Cleaner	131
6.5. Waste from hard coal mining	136
6.5.1. Case study from Poland	
– applications of hard coal mining and processing wastes	138
6.6. Waste from chemical mineral extraction	144
6.6.1. Rock salt mining	144
6.6.2. Sulphur Mining – current state	150
6.7. Relations between different stakeholders in the mining and processing waste management field	153
6.8. Conclusion	158

7. The natural, community and heritage dimension of mine waste disposal sites 159

7.1. Introduction	159
7.2. Waste from the extractive industry as an industrial heritage and environmental problem in Sweden	160
7.3. Waste from the extractive industry as a cultural heritage and natural protection issue in Poland	167
7.3.1. Heritage designation as a means of protecting historic mine waste heaps: the case of the Rydułtowy-Anna Hard Coal Mine in the Silesia Region	168
7.3.2. Land use planning and historical mining waste heaps: the case of the Julia Hard Coal Mine in Wałbrzych	170
7.3.3. Mine waste heaps as sites of outstanding natural value: the case of the Olkusz waste dump in the Małopolska Region	172
7.4. Mining and processing waste in France – comprehensive natural and heritage protection efforts in the Nord-Pas de Calais post-mining region	173
7.5. Conclusion	176

8. Economic aspects of recovery and reuse of mineral waste	177
8.1. Value estimation of the secondary raw materials located in waste storage sites	177
8.1.1. Waste management in the economy of mineral resources	177
8.1.2. Costs and macro- and microeconomical benefits from the use of mineral waste	178
8.1.3. Methods for assessing the advisability of using mineral waste	179
8.1.4. Method based on the mineral unit cost assessment	186
8.2. Cost-benefit analysis of recovery and reuse of mine waste – case study from Poland	187
8.2.1. Cost-benefit analysis in practical terms	188
8.3. Conclusion	194
9. Reclamation and revitalisation of waste dumps or land after waste recovery	195
9.1. Introduction	195
9.2. Methods of reclamation of waste dumps and contaminated sites	196
9.2.1. Case study from Sweden, Sulphur Mine Ervalla – cover systems	203
9.2.2. Case study from Sweden, Ranstad – barrier systems	206
9.3. Geotechnical aspects of waste dump reclamation	208
9.3.1. Case study from Poland – Landslide on the inner overburden dump of the Machów Sulphur Mine	214
9.4. Possibilities for waste dump revitalisation	223
9.5. Conclusion	235
10. Conclusions and recommendations	237
